...base frame only

Overview

ErgoStations are the finest adjustable height workstations in the business. The design is based on a rugged welded steel tubing frame with integrated AC motor/ball-screw drive system (battery powered models are available).

These safe and reliable units have built-in Extol quality and offer countless installation possibilities. With the standard 12" vertical working range, lift capacities between 500 and 3,500 lbs, and cost effective pricing, ErgoStation just makes sense.
